

Enhanced Codling Moth Larval Control!
For conventional and organic California walnuts!!

DECREASE DAMAGE

40% Average Reduction Compared to Insecticide Alone*

Simply tank mix with insecticide application

Available in 10, 20 and 40 acre container sizes!

MICRO-ENCAPSULATED SPRAYABLE!

“CIDETRAK DA MEC will provide a higher level of insecticide efficacy in killing hatched larval worms and protecting the walnut set that the grower currently sees and counts on by targeting the Codling Moth 1B, 2nd and 3rd flights, with the added benefit of decreasing damaged-nut sites for NOW to later infest.”

~ Dr. Douglas Light, USDA-ARS, Emeritus

CIDETRAK® DA MEC™ contains a novel, patented kairomone in a micro-encapsulated liquid formulation that influences the behavior of adult and larval Codling Moth, resulting in significant enhancement of the control of Codling Moth larvae when tank mixed with various insecticides. Additionally, Codling Moth adult control is significantly enhanced when mixed indirectly with airborne Codling Moth pheromone applied as a mating disruption treatment.

- **What it does:** Disrupts oviposition. Changes larval behavior: Stops/delays locating walnut; stops/delays walnut entry and reduces damage.
- **How to use it:** Simply tank mix with each insecticide application.
- **Longevity:** More than 14 days following application.
