	OFM	(Peaches) – Biofix 3/12, 340DD.
	PTB	(Almonds) – No activity.
Butte County (Gridley)	CM	(Walnuts) – No activity.
	NOW	(Almonds) – A few male moths. No egg laying.
	OFM	(Peaches) – Biofix 3/12, 332DD.
	PTB	(Almonds) – No activity.

CM = Codling Moth, OFM = Oriental Fruit Moth, PTB = Peach Twig Borer, CRS = California Red Scale, SJS = San Jose Scale, NOW = Navel Orangeworm, OLR = Omnivorous Leafroller

NOTE: The foregoing is supplied as a general information guideline only. This information is specific to the site location listed and collected by highly qualified PCA/Consultants. For optimum pest management decision making, each orchard should be individually monitored with pheromone traps and environmental monitoring equipment.

Mark your calendars for the action date listed below:

APRIL: CM, CM-DA COMBO, DA, CRS, and PTB traps should be set. **PHEROCON® NOW** egg traps and pheromone traps should be placed in the orchards.

New Products: **CIDETRAK® NOW MESO™** Mating Disruptant for NOW control in conventional and organic California tree nuts; almonds, pistachios, figs and walnuts **CIDETRAK® CMDA+NOW MESO™** Mating Disruptant for Codling Moth and NOW control in conventional and organic walnuts.

Both products provide season-long control through post-harvest with no moving parts, no batteries and no gummy deposits.

And, remember, **CIDETRAK® DA MEC™** enhances Codling Moth larval control when mixed in the spray tank with insecticide in conventional and organic walnut orchards.

Dr. Douglas Light, USDA-ARS, Emeritus, “CIDETRAK DA MEC provides a higher level of insecticide efficacy in killing hatched larval worms and protecting the walnut set that the grower currently sees, and counts on, by targeting the Codling Moth 1B, 2nd and 3rd flights. This also adds the benefit of decreasing damaged-nuts for NOW to later infest.”
