

This is our first IPM Partner Field Reporter for 2016 representing our 20th year of publication. You can now expect to receive bi-monthly reports through August, as with last season, that cover base minimum facts about the degree day accumulation by county for each insect. We will appreciate your comments and suggestions.

This year we are expanding the Field Reporter to provide coverage of up to six insects and additional areas. Accordingly, we have added a cooperator for the Fresno area and separately for the Butte County area.

The counties that will be reporting this season are as follows:

- Butte County – Chico Area
- Fresno County
- Kern County – Delano / McFarland Area
- Madera County – East of Madera
- Merced County – Ballico / Winton Areas
- Tulare County – Towns of Tulare and Exeter
- Sacramento County – River Delta Area
- Yuba County – Marysville Area

Mark your calendars for the action dates listed below:

- FEBRUARY:** OFM, OLR and SJS traps should be set.
- MARCH:** CM, CM-DA COMBO, DA, CRS, and PTB traps should be set. PHEROCON® NOW egg traps and pheromone traps should be considered.

Trece is launching or continuing the “roll out” of new control products this year for Codling Moth management in walnuts, apples and pears. **CIDETRAK® DA MEC™** is designed to enhance Codling Moth larval control. Many of you have already begun using the CIDETRAK® DA MEC™ successfully with insecticides and are looking to expand your use. Now, we are introducing a selection of novel DA-based mating disruption products, listed below.

The following are the important DA-based mating disruption control products that we are introducing this season:

- **CIDETRAK® CMDA COMBO™ MESO™ A (apples) and W (walnuts)** – Designed for Codling Moth management through mating disruption of adults at sharply reduced dispenser rates.
- **CIDETRAK® CMDA COMBO™ PP** – Designed for Codling Moth management through mating disruption of adults in apples and pears at higher dispenser rates than MESO but lower than the standard.

NOTE: You may also recall we have presented USDA data for walnuts that show both CIDETRAK DA MEC and CIDETRAK CMDA COMBO MESO provide significant Navel Orangeworm control through superior Codling Moth control.

All CIDETRAK products are approved for organic use!

The following PHEROCON® products we wish to highlight are listed below:

- **PHEROCON® NOW L2:** Navel Orangeworm HIGH and LOW amplitude pheromone-based lures for detection and monitoring of Navel Orangeworm in almonds, pistachio and walnuts.
- **PHEROCON® SWD:** NEW & IMPROVED in 2016 (lure and trap) monitoring system for Spotted Wing Drosophila.
- **PHEROCON® WHF Supercharger:** NEW advanced 2016 user-friendly Enhanced Release Supercharger monitoring system for Walnut Husk Fly.
- **PHEROCON® CM-DA COMBO™+AA:** The PHEROCON® AA kairomone lure significantly enhances male and female capture when combined with the PHEROCON® CM-DA COMBO lure. This is the best product for use in orchards treated with CIDETRAK® CMDA COMBO mating disruption products or CIDETRAK® DA MEC + insecticide for larvae.
- **PHEROCON BMSB:** Highly attractive long-life lures for detecting and monitoring Brown Marmorated Stinkbug.

Please note: The Field Reporter may be obtained by email or you can view it on Trece’s website. If you wish to receive the bi-monthly Field Reporter by email, please provide your email address to Trece’s Customer Service custserv@trece.com.

For more information about Trece’s new products, please visit our website at www.trece.com or call your local Trece Technical Sales Rep.
